

IPTV is a service which offers access to television channels from around the world. As an internet based platform it means a constant and stable internet connection is required.

IPTV offers:

- Live TV (4000+ channels in FHD, HD or SD)
- Catch Up
- Movies on Demand
- Boxsets on Demand
- Worldwide Channels
- NO CREDIT CHECKS
- NO CONTRACTS / PAPERWORK TO SIGN
- NO MONTHLY SUBSCRIPTION COSTS
- NO SATELLITE DISH OR CABLE INSTALLATION

Just 1 annual subscription. Once paid, you'll be sent your log in details same day!

Here is just a very small overview of the channels on offer:

Plus:

USA Sports, Entertainment, Documentaries & News

400+

Albania	104	Australia	246	Arab	124
Belgium	26	Canada	166	Denmark	37
DSTV Zambia	99	France	110	Germany	99
Greece	78	Hungary	27	India	51
Israel	20	Iran	57	Italy	171
Yugoslavia	342	Netherlands	108	Indonesia	118
Malaysia	42	Philippines	90	Vietnam	131
Poland	124	Portugal	166	Romania	55
Spain	192	Turkey	234	Adult XXX	408

NOTE:

It is important to ensure that you have a stable internet connection with at least 10Mbps – 15Mbps download speed. Additionally, it must not be throttled by your ISP. Throttling is when your ISP slows/reduces your bandwidth at peak times such as evening and weekends. This will cause the IPTV to buffer. Furthermore, if you have a download limit per month, you should be aware that streaming IPTV will use up a lot of your download limit. If your ISP limits your download amount, you should ensure that you have the option to increase your download limit to around 500GB per month or, ideally with No Download Limit. In the UK, unlimited downloads are standard, but for non-UK residents, it depends on your internet set up. If you have questions, please ask.

Devices:

Please ensure you have either:

- a) **Amazon Firestick** (*recommend 4K version for better picture quality*)

or

- b) **Android TV Box** (*Examples being: Mi Box, T3, Roku, Nvidia Shield etc*)
- c) **Android Phones**
- d) **iPhone/iPads**

NOTE:

Both types of devices can be used for downloading the IPTV app, but please keep the following points in mind:

- Firesticks do not come with an ethernet port and therefore cannot be connected directly to your router without buying an additional adapter. To find on search on Amazon for: *Firestick Ethernet Adapter 4k*.
- Firesticks have a limited amount of storage mostly designed to store the apps you download. If you want to record programmes/films, your Firestick will become full quite quickly and therefore it is recommended to use an Android box.
- An Android box will typically cost more than a Firestick, but will have more storage and an ethernet connector to connect it directly to your router.
- If you usually connect to your router over WiFi, it is recommended to use a “Dual Band” router which offers a 2.4GHz and 5GHz line from the same router. The 2.4GHz runs slightly slower, but the signal reaches further. The 5GHz runs faster, but the signal distance is much shorter. Make sure where possible to connect your device to 5GHz but also remember not to connect everything to that line.
- Depending on your location, you might require a VPN. If you require a VPN, it is recommended to use a well-known VPN company such Express VPN, NordVPN, Surfshark etc. There is a VPN built in to the Lazaus app as standard which you can test first, but it's effectiveness is dependent on your location.

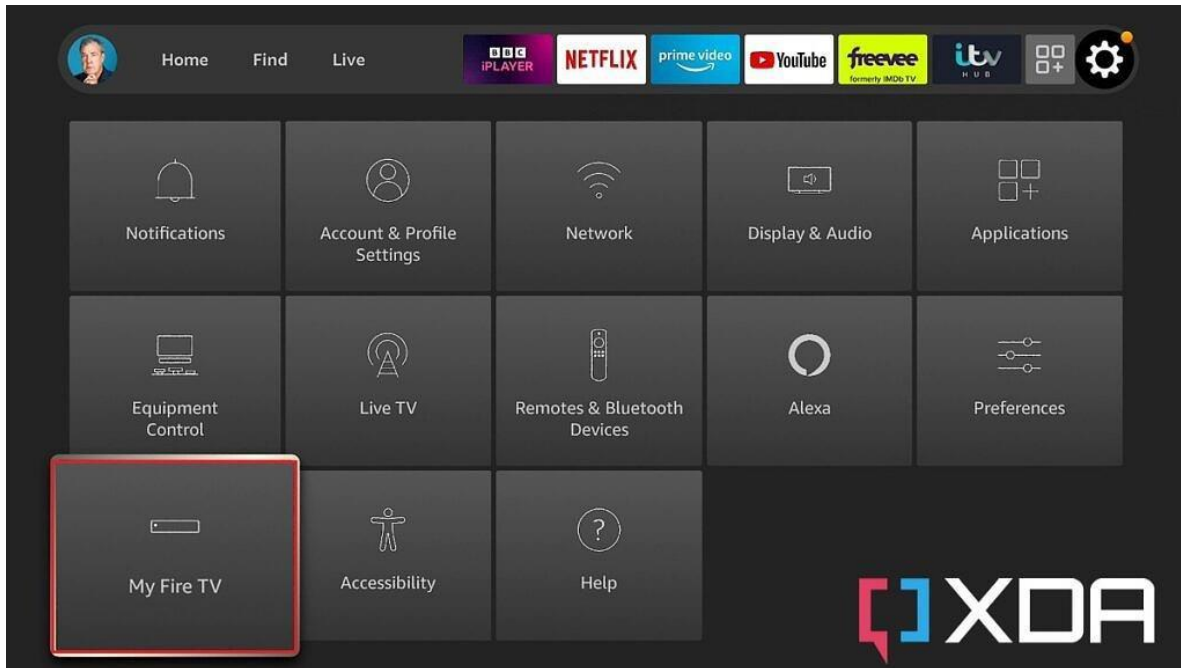

Download Instructions Via Firestick:

Step 1:

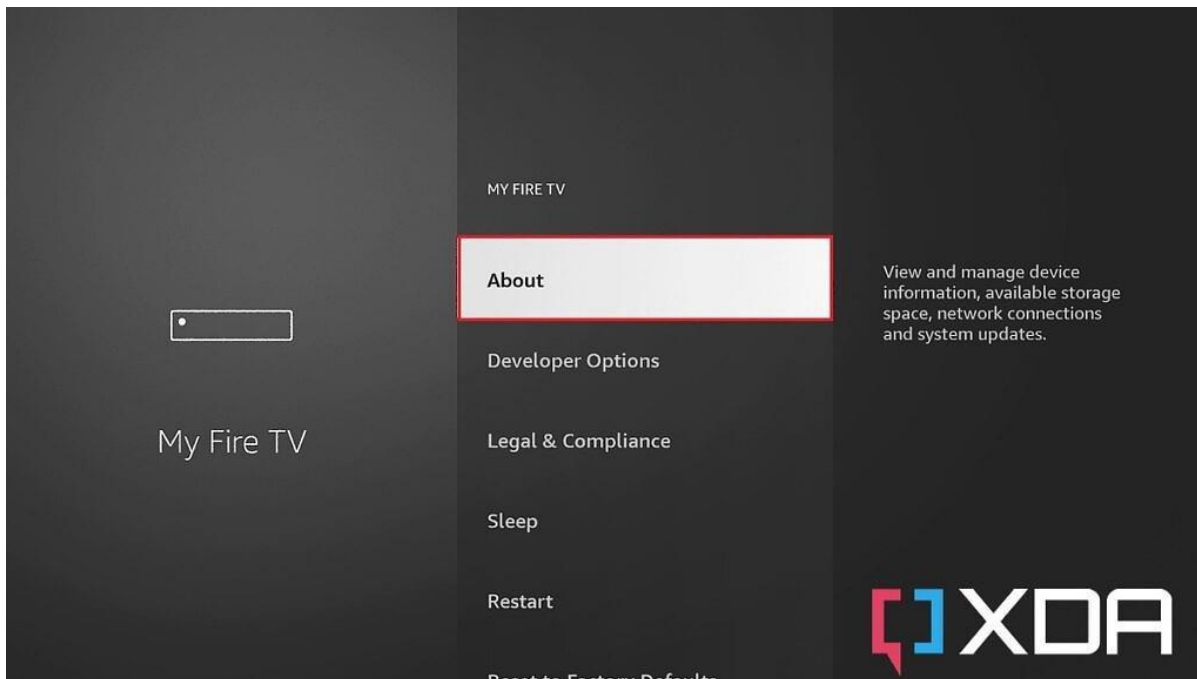

You must ensure that your device settings are set to “Allow Apps from Unknown Sources”. Please check your device settings and allow before proceeding to the next step.

For Firestick you do the following:

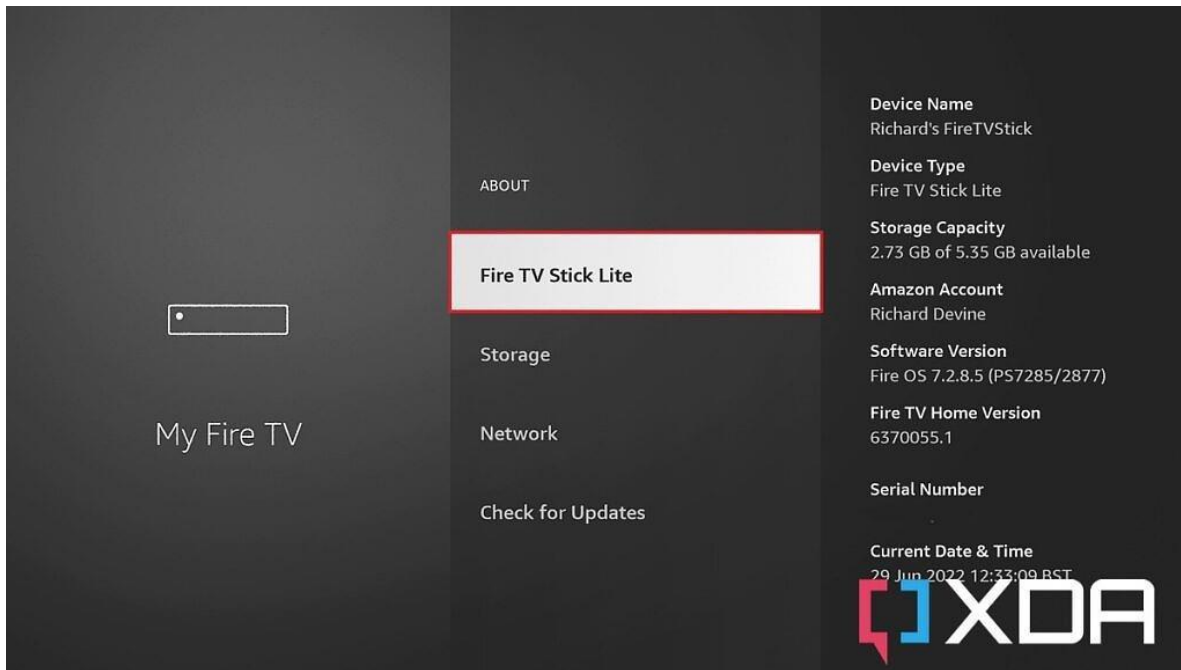

1. On your Fire TV, open **Settings**.
2. Select **My Fire TV**.

3. Select **About**.

4. Highlight the first option in the list. This should be a reference to your specific device.

5. Press the remote as if you were selecting this item **seven times**.
6. When complete you should see a message telling you you're already a developer.
7. Press the back button on the remote to go back to the previous menu.

If you're using a Fire TV television then step 2 may refer to "Device & Software" instead, but the rest of the steps are the same. On completing the steps you'll now see the missing Developer Options menu has re-appeared.

Step 2:

Before downloading Taurus, you need to download an app called "Downloader". Go to your app store on your device and search "Downloader". It will be orange in colour and look like the image 1 below.

Image 1

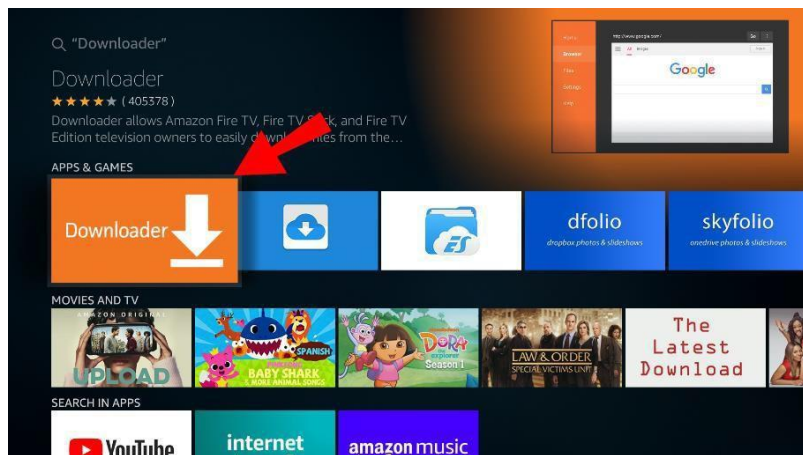

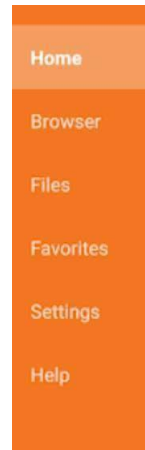

Image 2

When downloaded, open this app.

NOTE: You might see a message which reads "Browser Plugin Missing". If so, follow the instructions on the screen which usually suggests going to the Home section as per image 2 above, and entering the following address:

b.aftvnews.com

When prompted, install the plugin browser and then return to the Home section of this downloader app.

Step 3:

Once the browser plugin is installed, you'll be presented with an address bar which looks like the image below:

In the address bar, delete everything and enter the following code:

901471

Other Android Devices without Downloader: <https://aftv.news/901471>

This will install the “Required App”.

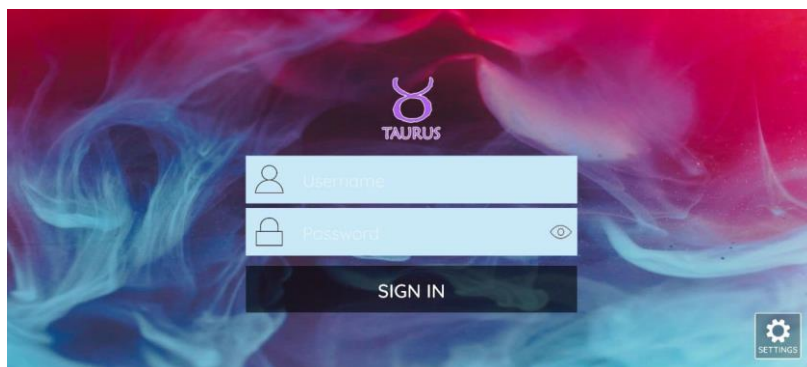

Step 4:

Select Install

NOTE: When prompted, you **MUST** allow access to storage otherwise the app will not work.

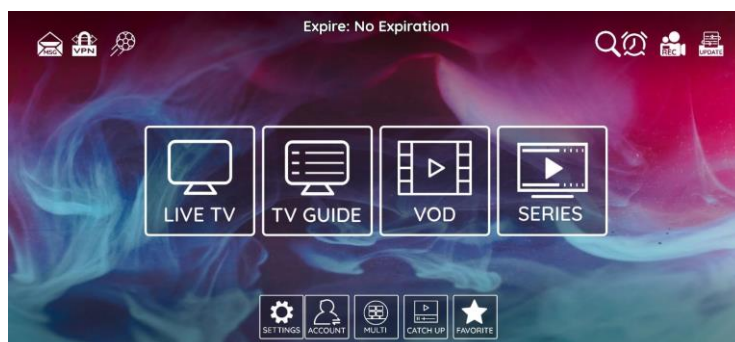

Step 5:

When the Taurus app is downloaded, click on it to open it for the first time and you will see this log in page:

Enter your log in details and click on “Sign In”

NOTE: The app will probably perform an update of the channels. This is perfectly normal. You will then arrive at the “Home Screen” which looks like this:

That's it! Your app is downloaded, you're logged in and ready to start watching TV!

Download Instructions Via Android

Go to <https://aftv.news/901471> via your browser and install the app. Make sure to allow access so that it can load

Download Instructions Via iPhone/iPad

- 1) In the app store install an app called supa legacy iptv.
- 2) Select server 2 and input code 8787.
- 3) Then login with your details.

Please see the next page for additional information on features and troubleshooting.

Features:

- Live TV will give you access to live TV channels from around the world. These are usually categorised by the menu on the left hand side.
- When you see a channel which you plan to watch regularly, you can press and hold on that channel until a star appears. This will have then selected it as one of your “favourite” channels and appear first when you click on the Live TV button.
- You will sometimes see the words FHD, HD or SD after the channel name. FHD is full high definition and provides the highest quality image, but will also require more bandwidth from your internet. HD is high definition and SD is standard definition. SD requires less bandwidth but will be in a poorer quality image than FHD/HD.
- EPG Timeshift is a feature which allows you to set your time zone in the app so that what is showing Live matches the time zone you're in. To adjust the time zone, click on the settings icon from the homepage, and select EPG Timeshift. If you are in mainland Europe and 1hr ahead of UK time, set the timeshift to +1hr. If you're 2hrs ahead of UK time, set the timeshift to +2hrs and so on.
- Layouts. There are 2 types of layout which you can choose from. To switch between the layouts, select settings from the homescreen, then select “Other Settings”. Then toggle “On” the options which reads “New Layout Preview”.
- TV Guide will show you what's on in the format of the TV guide and can be accessed from the homepage.
- VOD = Movie library. You can access 1000's of movies on demand by genre.
- Series = Boxsets. You can access 100's of boxsets by genre. Click and press on a boxset to add it to your favourites which means when you access Series again, it will show on the front screen.
- Catch UP gives you the option to watch programmes from a small number of channels which were shown on previous days. The channel list is limited, and it is important to note that the further back (day) you watch will effect it's quality. Programmes from the previous 24hrs are recommended to watch.
- When you select a Live TV programme, a live preview will show on the right hand side. To enter full screen, simply press select again.
- Foreign Channels. To access channels from around the world, scroll down the channel list on the left hand side after entering Live TV.
- 2nd TV subscription. If you want to have Taurus installed on a 2nd TV (kitchen, bedroom etc), this is possible without paying for a full subscription. Please contact your provider for more details and price.

Troubleshooting:

As with any internet based TV, you may run in to small issues from time to time. Please check the troubleshooting tips below before contacting us as these eliminate 95% of issues.

1. The app will perform “updates” of all channels in Live TV, VOD & Series automatically, however, if something is not working, you can perform a manual update yourself by clicking on the update button in the top right hand corner of the home screen.
2. If you are experiencing any freezing/buffering, this is usually (but not always) caused by internet issues. You should at first perform the following:
 - a) Clear the cache of the app which can be done in the app settings of your device. It is recommended to check this regularly and clear the cache if the cached data is showing more than 1MB.
 - b) Perform a manual update as outlined in point 1 above.
 - c) Restart your device.
 - d) Restart your router.
 - e) Activate your VPN (ensuring the VPN settings are accurately set).
If you are still experiencing issues, this will be because your internet download limit has been reached, and/or your internet supply is having issues.
3. If you are unable to log in to your app, meaning your username and password details are correct, but the app will still not load, please check your internet connection. The app will not load if there is no internet connection.
4. Audio Sync. If you are experiencing issues with the sound not matching the lips, you can resolve this by accessing the settings menu from the home screen, then click on “Player” and changing the option from VLC Player to EXO Player.

BASIC STEPS IF NOT WORKING

1. Reboot Internet
2. Reboot Firestick
3. Clear Cache
5. If still not working at this point, then report issue to us
